1

Since the following operation is correct:

$$024 + 043 + 013 + 033 = 201$$

Let base $= k \in \mathbb{Z}^+, k > 4$

We can formulate the following equations:

$$4+3+3+3\pmod{k} = 13\pmod{k} = 1$$
 (1)

$$2+4+1+3+c_1 \pmod{k} = 10+c_1 \pmod{k} = 0$$
 (2)

$$0 + 0 + 0 + 0 + c_2 \pmod{k} = c_2 \pmod{k} = 2$$
 (3)

Where c_1, c_2 are the carry-out generated by the addition of the previous digits.

By (1), and k > 4, we knew that the possible values of k are 6, 12.

Case 1: k = 6

Suppose k = 6, we have:

$$4+3+3+3\pmod{6} = 13\pmod{6} = 1$$
 (1)

$$2+4+1+3+c_1 \pmod{6} = 10+c_1 \pmod{6} = 0$$
 (2)

$$0 + 0 + 0 + 0 + c_2 \pmod{6} = c_2 \pmod{6} = 2$$
 (3)

By (1), we knew that $c_1 = 2$, thus equation (2) holds since $10 + 2 = 12 \equiv 0 \pmod{6}$. Similarly, we knew that $c_2 = 2$, thus equation (3) holds since $0 + 2 = 2 \equiv 2 \pmod{6}$.

Therefore, k = 6 is a valid solution.

Case 2: k = 12

Suppose k = 12, we have:

$$4+3+3+3 \pmod{12} = 13 \pmod{12} = 1$$
 (1)

$$2+4+1+3+c_1 \pmod{12} = 10+c_1 \pmod{12} = 0$$
 (2)

$$0 + 0 + 0 + 0 + c_2 \pmod{12} = c_2 \pmod{12} = 2$$
 (3)

By (1), we knew that $c_1 = 1$ since $\lfloor 13 \div 12 \rfloor = 1$, however, this contradicts with equation (2) since $10 + 1 = 11 \not\equiv 0 \pmod{12}$.

Therefore, k = 12 is not a valid solution.

The only possible base is k = 6.

(1)

| Decimal | weighted code | | | | |
|----------------------------------------|---------------|---|----|----|--|
| Decimai | 8 | 4 | -2 | -1 | |
| 0 | 0 | 0 | 0 | 0 | |
| 1 | 0 | 1 | 1 | 1 | |
| $\begin{bmatrix} 2 \\ 3 \end{bmatrix}$ | 0 | 1 | 1 | 0 | |
| | 0 | 1 | 0 | 1 | |
| 4 | 0 | 1 | 0 | 0 | |
| 5 | 1 | 0 | 1 | 1 | |
| 6 | 1 | 0 | 1 | 0 | |
| 7 | 1 | 0 | 0 | 1 | |
| 8 | 1 | 0 | 0 | 0 | |
| 9 | 1 | 1 | 1 | 1 | |

(2)

| Decimal (d) | 9-d | weighted code for $9-d$ | | | |
|-------------|-----|-------------------------|---|----|----|
| Decimal(a) | | 8 | 4 | -2 | -1 |
| 0 | 9 | 1 | 1 | 1 | 1 |
| 1 | 8 | 1 | 0 | 0 | 0 |
| 2 | 7 | 1 | 0 | 0 | 1 |
| 3 | 6 | 1 | 0 | 1 | 0 |
| 4 | 5 | 1 | 0 | 1 | 1 |
| 5 | 4 | 0 | 1 | 0 | 0 |
| 6 | 3 | 0 | 1 | 0 | 1 |
| 7 | 2 | 0 | 1 | 1 | 0 |
| 8 | 1 | 0 | 1 | 1 | 1 |
| 9 | 0 | 0 | 0 | 0 | 0 |

By obersving the table, and by the fact that 9-d is the complement of d, we can see that the weighted code for 9-d is the complement of the weighted code for d.

Which means that to obtain the code of 9-d, we could simply flip the bits of the code of d.

Find the complemet of the function by only DeMorgan's laws and involution law:

$$F(A, B, C, D) = AB'C + (A' + B + D)(ABD' + B')$$

As required, we can only use the below properties:

$$(AB)' = A' + B'$$
$$(A + B)' = A'B'$$
$$(A')' = A$$

$$\begin{split} F'(A,B,C,D) &= (AB'C)' \cdot \left[(A'+B+D) \cdot (ABD'+B') \right]' \\ &= \left[(AB')' + C' \right] \cdot \left[(A'+B+D)' + (ABD'+B')' \right] \\ &= (A'+B+C') \cdot \left[(A'+B)'D' + (ABD')'B \right] \\ &= (A'+B+C') \cdot \left[AB'D' + \left((AB)' + D \right) B \right] \\ &= (A'+B+C') \cdot \left[AB'D' + (A'+B'+D)B \right] \\ &= (A'+B+C') \cdot (AB'D' + A'B+BD) \end{split}$$

Ask is further derivation is needed.

Obtain sum of product form:

```
 (A+B+C+D)(A'+B'+C+D')(A'+C)(A+D)(B+C+D) \\ = \{[A+(B+C+D)](B+C+D)\}(A'+B'+C+D')(A'+C)(A+D) \\ = [A(B+C+D)+(B+C+D)(B+C+D)](A'+B'+C+D')(A'+C)(A+D) \\ = [AB+AC+AD+(B+C+D)](A'+B'+C+D')(A'+C)(A+D) \\ = (B+C+D)(A'+B'+C+D')(A'+C)(A+D) \\ = (B+C+D)[A'+(B'+C+D')C](A+D) \\ = (B+C+D)[A'D+A(B'+C+D')C] \\ = (B+C+D)[A'D+AB'C+AC+ACD'] \\ = (B+C+D)[A'D+AB'C+AC] \\ = (B+C+D)[A'D+AC] \\ = A'BD+A'CD+A'D+ABC+AC+ACD \\ = A'D+AC \quad \Box
```

Obtain product of sums form:

$$\begin{split} BCD + C'D' + B'C'D + CD \\ = C'D' + B'C'D + CD \\ = (C' + D)(C + D') + B'(C + D')' \\ = [(C' + D) + B'][(C + D')' + (C' + D)] \\ = (B' + C' + D)(C'D + C' + D) \\ = (B' + C' + D)(C' + D) \\ = B'(C' + D) + (C' + D)(C' + D) \\ = B'(C' + D) + (C' + D) \\ = C' + D \quad \Box \end{split}$$

| Inputs | | | Output | |
|--------|---|---|--------|--|
| A | В | С | Output | |
| 0 | 0 | 0 | 0 | |
| 1 | 0 | 0 | 0 | |
| 0 | 1 | 0 | 0 | |
| 0 | 0 | 1 | 0 | |
| 1 | 1 | 0 | 1 | |
| 0 | 1 | 1 | 1 | |
| 1 | 0 | 1 | 1 | |
| 1 | 1 | 1 | 1 | |

From the table we can form the sum of products expression:

$$ABC' + A'BC + AB'C + ABC$$
$$=ABC' + AB'C + BC \quad \Box$$
